GEERFAB AUDIO ANNOUNCES THE D.BOB (DIGITAL BREAKOUT BOX)

Extract DSD 64 and up to 24-bit/192 kHz from SACDs & Blu-ray Audio discs and output with full copy protection to an external D to A converter for the first time ever!

MILWAUKEE, WISCONSIN, May 6, 2019 – Fresh from a successful introduction at AXPONA (Audio Expo North America) 2019, the GeerFab Audio D.BOB Digital BreakOut Box will be making its European debut at the HIGH END 2019 Show in Munich, Germany May 9-12 at the Mytek Digital booth.

Finally, and for the first time legally, hi-res physical discs can be heard in their full high resolution glory with the use of an external digital-to-analog converter. The D.BOB extracts DSD 64 from SACDs and PCM up to 24/192 from Blu-ray Audio discs, via the HDMI data stream from a player/transport with HDMI out and outputs DSD 64 via the DoP (DSD over PCM) protocol and hi-res PCM through the S/PDIF Coax and Toslink Optical outputs.

The entire process is fully HDCP (High-bandwidth Digital Content Protection) and copy protection compliant. Additional features: an HDMI pass-through for player menu settings and other video uses, Mini-USB for firmware updates and a DC 12V input for battery power (AC to DC adapter included).

Units will be available for retail sale in July. Dealer inquiries welcome.

About GeerFab Audio www.geerfabaudio.com

A division of GeerFab LLC, founded in 2006 in Milwaukee, WI as GeerFab Acoustics, a leading developer and manufacturer of acoustic products for recording, broadcast, live performance, restaurants, hospitals, museums and education. GeerFab Audio was founded in 2017, with the D.BOB being the first of a good handful of products designed to release hi-res discs of all kinds from the tyranny of internal DACs-in-the-box.
